

Group Information Notes

Team Review Notes — March 21, 2026

1. Restaurants

- Tariq's **GET all restaurants** endpoint and Omarion's **GET single restaurant** endpoint have overlapping functionality. 😊
- **Action:** Merge or refactor to reduce duplication and ensure consistency. 😊

2. Delivery / Pickup

- Pickup location currently unclear/inconsistent.
- **Changes needed:**
 - Default pickup location should be the **restaurant name**.
 - Allow users to **specify a custom pickup location**.
 - Consider adding a **restaurant address field** to make each restaurant more distinct.

3. User ID / Order History

- Inconsistency in user identification: 😊
 - Siame uses X-user-id 😊
 - Talon and Siame need alignment 😊
- **Action:** Standardize user ID handling across routes (possibly integrate with auth system). 😊
- Order history:
 - Currently uses timestamps
 - → Revisit later for improvements (e.g., sorting/filtering).
- Response cleanup:
 - Remove unnecessary **restaurant_name** variables from responses.
 - Ensure returned data is accurate and minimal.

4. Orders (Tariq)

- Order creation needs stricter validation.

- **Changes needed:**
 - Add more **mandatory fields**.
 - Prevent creation of **empty orders**.

5. Menu

- Additional improvements planned.
- **Action:** Update endpoints with new requirements (to be defined).

Look routes, only function

Error fetch orders- check schamas

Tariq **get restaurant in router/change** 😊

Order router get_order by user not call proper function

Some things use order_store

Team Review Notes — March 22, 2026

Delivery / Pickup

- The **pickup location** behavior is currently unclear and inconsistent.
- Required changes:
 - Set the **default pickup location** to the **restaurant name**.
 - Allow users to enter a **custom pickup location**.
 - Consider adding a **restaurant address** field so restaurants are more distinct.

Orders

- If time permits, the **update order** feature should allow users to **add more items**.
- **Create order** should validate that submitted **menu items actually exist**.

Tariq

- Order creation needs **stricter validation**.
- Required changes:
 - Add more **mandatory fields**.
 - Prevent users from creating **empty orders**.

Users

- No major issues noted.
- Current state: **Good**.

Notifications

- Make sure **all notification messages are present**.
- **Siam** will fix the notification issues assigned to him.

Restaurants

- No notes added yet.

Menu

- There are currently **three endpoints implemented**.
- If time allows, add the **remaining endpoints**.

Testing

- New branches for **orders testing** will be created.
- Everyone will need to **rewrite their tests** so they match the new system.

Team Review Notes — March 23, 2026

- Github Action Coverage
- Feat7 - Payment System [Talon]
 - Feat7-SR1
 - Feat7-SR2
 - Feat7-SR3
- Feat2-Restaurant and Management
- Menu Items Routes missing (Delete, Update)
- Tests SR3, make sure functions.
- Feat6 - Order Cost Calculation
- Change code to fit new backend

Other Stuff:

- Siam Tests not working
- Test order files need to be cleaned up
